PART 1: Design in writing

For each element:
What states can it be in? All of them.
How does content get in, and out?
How does it work with no mouse?
What confirms an action happened, or failed?
What happens at zero, at maximum, at longest string?
Does it survive a save and load?
How does a new player learn it exists?

Health Bar.
What states can it be in?
normal state only.

How does content get in, and out?
content as if the health decreases when someone hits the player or increases, when the player takes special items for health increase.

How does it work with no mouse?
It is not affected by mouth at all

What confirms an action happened, or failed?
-

What happens at zero, at maximum, at longest string?
It is inside the bar.

Does it survive a save and load?
Yes definitely.

How does a new player learn it exists?
-

Dialogue Box

What states can it be in? All of them.
Normal and pressed? Changing whenever the player clicks the mouse.

How does content get in, and out?
After interaction with npc. The text is only content inside of the box. It ends when the dialogue has no continuation.

How does it work with no mouse?
The player presses the “space” button instead of clicking with the mouse.

What confirms an action happened, or failed?
The text changes if the action happened and texts stay if it failed.

What happens at zero, at maximum, at longest string?
At zero, the dialogue box should not be visible. At max, it fills the whole box, making the whole text go downwards. At longest, it fills all the length side inside the box, and goes down the rest of the string.

Does it survive a save and load?
No? You can not save and load the game during the dialogue box.

How does a new player learn it exists?
It appears at the bottom with a special box taking up space in the screen that was usually empty.

Pause menu.
What states can it be in? All of them.
Normal, Pressed, Focus.

How does content get in, and out?
It doesn't have content depending on players actions.

How does it work with no mouse?
Pressing Esc.

What confirms an action happened, or failed?
The screen will be hovered in black. The actions in the game stopped and has buttons to go back, save, load the game and go to the main menu. If failed it doesnt change the scene/screen

What happens at zero, at maximum, at longest string?
It has a small placeholder to write specific words. If it is too long it will be cut the word.

Does it survive a save and load?
No.

How does a new player learn it exists?
It appears in the corner of the screen.
